

Six of the Best Reasons to Use the Oska Pulse

If you're wondering whether the Oska Pulse might be for you, here are six of the things people love most about it.

1. Pain relief:

One of the biggest benefits of PEMF is how it can ease long-term pain, especially in the lower back. Its specially tuned magnetic fields are designed to calm inflammation (the body's swelling-and-heat response) and settle muscle spasms, which helps you move more freely and hurt less.

2. Faster healing:

The Oska Pulse is designed to create an environment that helps accelerate the body's natural healing processes. That's a real bonus when you're recovering from an injury, especially surgery.

3. Better circulation:

The magnetic fields are designed to get your blood moving, so oxygen-rich blood can reach areas that might have been missing out on nutrients and oxygen. Better circulation can mean easier movement, fewer muscle cramps, and a healthier body overall.

4. Removes cellular debris:

The Oska Pulse also stimulates the lymphatic system, which helps remove toxins and waste from the treated area.

5. Less stress:

The electromagnetic fields have also been shown to help lower stress levels in people who are dealing with pain — and when you're in less pain, it's a little easier to relax.

6. Wear it anywhere, anytime:

The Oska Pulse is beautifully portable, can be worn over your clothes, and couldn't be simpler to use. Oh, and one more thing — even pets seem to love their Oska!

Individual results may vary.
